VROOM Car Rental Services – Business Analyst

Student Id 2329860

Student Name : Karan Sah

Section :L5CG5

Group :L5CG5 (VROOM)

Module Leader : Biraj Dulal

Lecturer : Biraj Dulal

Acknowledgment

This module has been a great experience on how a real-world project works thus giving with great motivation to study and make this project through research. I would like to thank module leader Mr. Biraj Dulal teacher for providing with this wonderful opportunity to write the project on collaboration on a car rental system. I am thankful to our tutor Mr. Ashish Acharya for all his guidance and nurturing during all the tutorials and workshops and his relentless processes of correcting mistakes and imparting knowledge. I am also grateful to Herald College Kathmandu for providing with this module and the college resources that made this report writing possible.

Likewise, I would also like to acknowledge the indirect support given by friends which was a wonderful aid in completing this project as well as the report. The team members of this project who were the Project Manager and Developers are also a crucial part of the project and I am thankful for their collaboration on the project.

1. Self-appraisal form

Student number	2329860	Name	Karan Sah
Project	VROOM – CAR RENTAL SYSTEM	Date	22 nd April 2024
Role	Business Analyst	Team	L5CG5 (Team VROOM)
Sprint	1		

2. Personal objectives – performance measurement

Objectives	Evidence provided	Evaluation <i>Student / tutor</i>	
Functional Requirement and Design	Product backlog with user stories was made along with their priority whereby product backlog comprises of priority, user stories, and acceptance criteria through real-time research and product requirement and priority was set after talking with the client. In the designs, the wireframe for the website of pages, ERD, use case, activity, and sequence diagram was made from figma, lucidchart, and plantUML thus making the development process easier. Functional requirement and design, product backlog's table, screenshots of wireframe and UML diagrams are in Appendix A. Links: Product backlog/User Stories Sprint backlog Designs (Wireframes, UML, ERD)		

	Wireframes UML ERD		
<i>Tutor feedback:</i>			
Scoping	As the concept of the website was totally unfamiliar, first similar websites were visited to see the features and functions. Payments, vehicle listings and filters, user accounts, booking system were minimum criterion. HTML, CSS, JS for frontend and PHP for backend with SSL certificate provided by free hosting website infinityfree were finalized in meeting. The website is made such that the user can rent out, sort and filter cars and admin can manage the cars. As evidence questionnaire asked to car rental, website, an example website has been provided in Appendix A. Links: Report on Scoping Questionnaire Market Analysis Example Car Rental Website

3. Collaboration Document

3.1 Evidence of good collaboration

For the method of collaboration, and a good project management, jira was used as a sprint backlog and after fulfilling task it was put in done section.

Link of the wireframe was shared via google chat and all the UML diagrams were too shared here as discussed in the meeting of our collaboration.

Online and in person meeting were held to make the collaboration more effectively.

Evidences provided include google chats in group, pictures of online and offline meetings.

Link:

[Google Chats](#)

[JIRA](#)

[Online Meetings](#)

4. Continuing Personal Development (CPD)

The ways and uses of all the principles of collaboration to make a website was the first time. Many terms and apps were unfamiliar. Product backlog, wireframes, UML, and sprint backlog were all equally challenging.

Nevertheless, with the aid of teachers, online documentation and videos, team members, continuous meetings, sprints, and continuous research all the tasks were completed as required.

Links to the report on personal development and videos I watched for the same purpose:

[YouTube Channel for Business Analysts](#)

[YouTube for Collaborative Development](#)

[Report on Continuous Personal Development](#)

[Meeting Minutes](#)

5. Issue tracking

The issues occurred during the first sprint were minimum with only 3 issues that occurred altogether that we had to work on in depth while all the other issues were minimalistic. There were issues regarding Contact Us section, the submit button malfunction, admin page wireframe. The issues were first listed on Jira after the issues were found and the issues were also solved during offline and online meetings through group collaboration.

Links on the screenshots of issue tracking are in Appendix B:

6.4 Scoping

6.4.1 Report on Scoping

The ideas for the website was first taken from another website of sparkcar car rental whereby the functionalities and designs were first seen and the idea taken. With the client meeting many requirements were taken through which the general ideas of functions of website was taken. The minimum criterion were first vowed to be made and after their completion additional features were to be added if possible. The minimum requirements were to sign up, login, vehicle listings, connect to payment app, vehicle listings and filtering, user and admin functionalites and accounts.

There were also concern for security nevertheless it was solved by the SSL certificates provided by the free hosting infinityfree. For fronted HTML, CSS and JS were finalized and for backend, PHP was to be used. The website is basically for renting cars by users whereby they can rent, sort, filter cars, and pay for the renting duration and the

admin can manage the cars on the website. Likewise, a questionnaire was prepared to ask the curiosity about such website for real-time car rental services whereby they provided us with the answers required. Similarly, market research analysis too was done featuring out the challenges and scopes of such website.

The UI/UX design were to be made simplistic thus making it easier for user to navigate. For this appropriate wireframe was to be used. Thus, with the features of the website, technologies to be used in the website, its requirements like vehicle listings, booking system, admin and user accounts, gateway of payment, UI/UX designs, Security measures, and analytics the total scoping of the car rental website was done.

[Back to Table](#)

6.4.2 Questionnaire

Questions for the Car Rental Services:

1. What criteria have you set in order for the customers to be able to rent a vehicle from your service?
2. Who can rent a vehicle from your service? Anyone or specific people?
Do mention: age limit, license
3. Do you check the license before you give the car? If yes, how do you do it? Manually or online?
4. Do you offer '**hire a driver**' service?
5. Do you offer pickup and drop off at a specific location or do the customers have to drop off the vehicle at the permanent area?
6. What policy do you have for late returns?
7. How can you get assured that all the customers will return the vehicle in the good condition?
8. How can you maintain/ assure safety of the vehicle?
OR,
If the vehicle gets in an accident, how will you cover the. Maintenance and who will be responsible for the customers in the vehicle (the company or the customers)?
9. What type of collateral should the customers deposit in order to assure the company that they will return the vehicle?

10. Do you offer the option of cancellation? If yes, do you return the whole deposit or do you return the deposit after some deduction?
 11. Do you accept online payment after booking or do you accept (cash) when they come for pickup?
-

12. **Fuel:** Is the fuel calculated in the fare? When the customers return the vehicle, do they need to make the tank full or they can return it as they want?
13. If customers book the vehicle before some days, but due to some reasons cancel the booking. Before some hours of the pickup, will it be a loss for you? How do you manage it?
14. How can you assure the maintenance of the interior the vehicle, example: damage of the interior of the vehicle, breaking or making it dirty.
15. Do you offer rental only in daily package, or hourly package or weekly package?
16. Do you allow the vehicle to be taken to all parts of the country of the or are the vehicles only allowed to be taken to certain areas?
17. Is the vehicle allowed to be taken out of Nepal as well?
18. In case, if the vehicle stops in the middle of the road due to any internal issue in the vehicle, who will be responsible for the payment of the repair of the vehicle? Customers or the rental service?

Thank you for your time for answering the questions.

6.4.3 Market Analysis

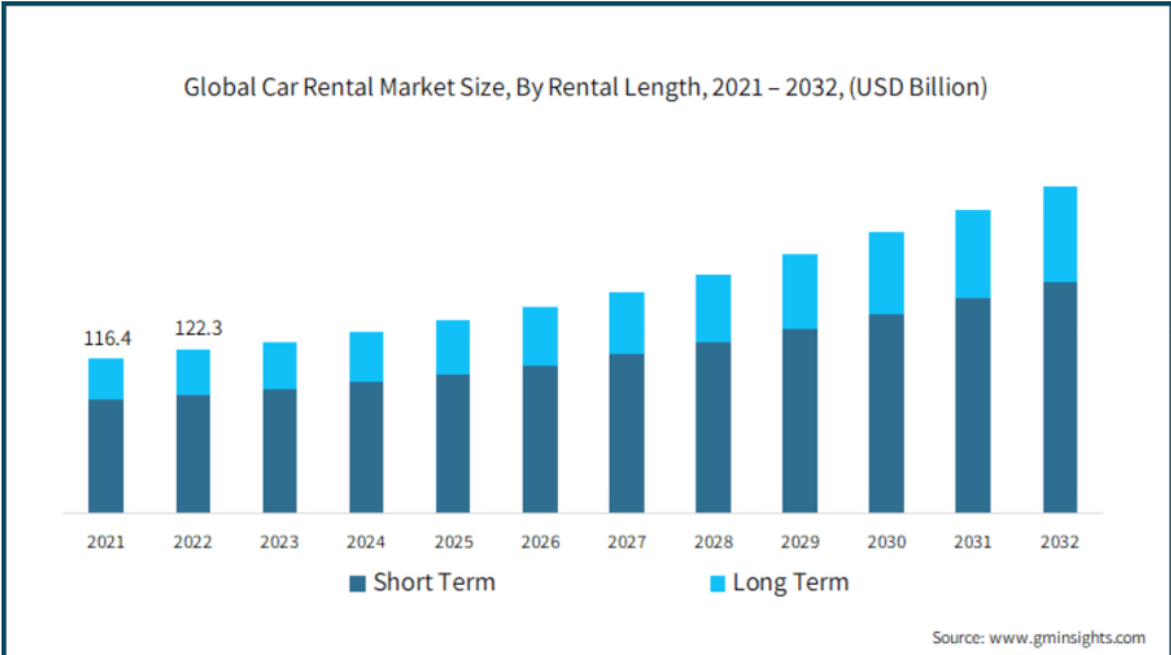

Car Rental Market in Nepal: Market Analysis

Overview

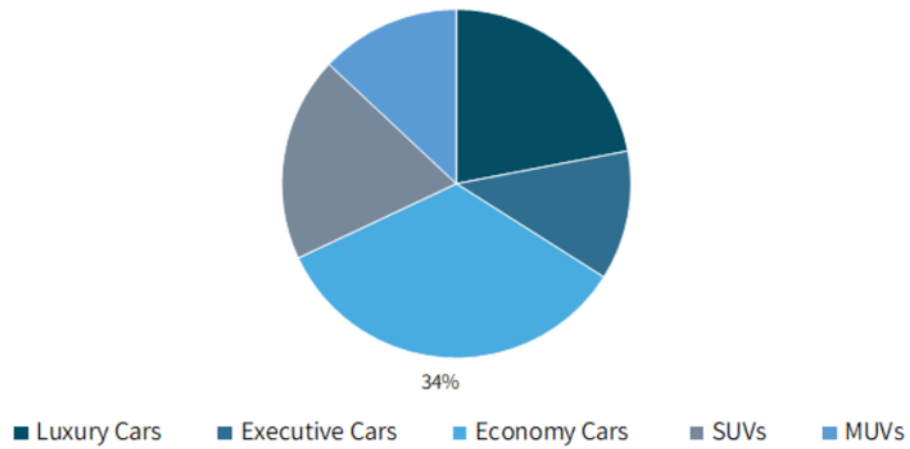

Serving both domestic and international travelers to offer transportation solution through self-drive and hiring chauffeurs can be considered car rental in Nepal. It is crucial for facilitating business, travel, tourism, occasions and local transportation. The industry is determined through tourism trends, regulatory frameworks, economic conditions and infrastructure development.

Statistics

The car rental market in US only was valued to be USD 122.3 billion in 2022 only (Global Market Insights, 2023).

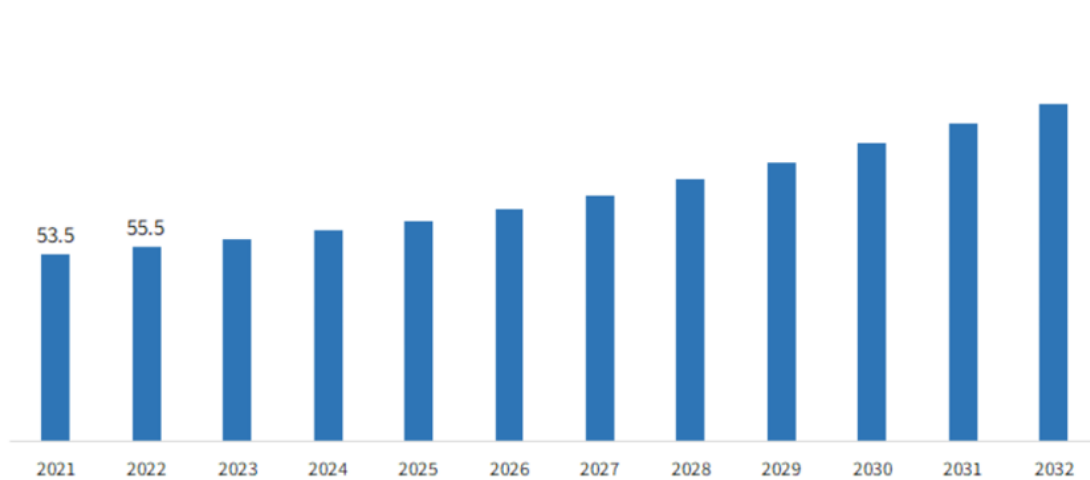

Global Car Rental Market, By Vehicle Type, 2022

Source: www.gminsights.com

U.S. Car Rental Market Size, 2021 -2032, (USD Billion)

Source: www.gminsights.com

Market Landscape

Mix of local and international rental companies in Nepal like Self Drive Nepal, Spark Car, Graceful Adventure and many other travel and tours companies in collaboration with car rental companies have been facilitating car rental services in Nepal. Major cities and tourist destinations Kathmandu, Pokhara, Chitwan has witnessed higher demand for rental vehicles majorly during tourist seasons. Rental options can be economy cars to SUVs to vans.

Key Drivers

- Tourism: Rich cultural heritage, angelic natural landscapes, adventure tourism create demand for rental cars.
- Infrastructure Development: Improvements in road and connectivity to destinations can increase the market.
- Business Travel: Multinational corporations, NGOs and diplomatic missions in Nepal create demand for car rental.
- Local Transportation: Local transportation being congested and limited, locals use rental services for daily commutes and errands.
- Adventure Tourism: Trekking, mountaineering, and adventure sports creates opportunities for rental services.

Challenges

- Regulatory Hurdles: Licensing, taxation, insurance create barriers to entry and operational obstacles for car rental companies
- Infrastructure Constraints: Pits in road, mud and uneven road surfaces may damage vehicles. Rural and Mountainous regions may also be an operational obstacle.
- Seasonal Demand: The car rental market in Nepal experience seasonal fluctuations with favorable conditions being in festivals, holidays, favorable weather conditions and challenging in other periods
- Competition: Competition from other local and international rental companies as well as informal operators can put a lot of pressure.
- Safety and Security Concerns: Safety concerns due to road conditions, traffic congestion, vehicle maintenance, theft can cause difficulties.

Conclusion

The car rental market in Nepal presents opportunities for growth driven by tourism, infrastructure development and changing consumer preferences. While there are challenges in this, if capitalized on opportunities through strategic initiatives there can be a piece of pie for the business owner.

7.2.4 Report on Continuous Personal Development

The unfamiliar terms like collaborative development, agile, scrum, jira, backlog, and wireframe to gaining knowledge about them and doing them on my own has been a great learning process and curve in my personal development, not only in terms of software development but to my personal growth and soft skills too. The experience has shaped me to face the challenges professionally and has taught me to work with multiple people and within a deadline. The first sprint was very rushed and started with completely alien concepts which gradually shaped into the completion of the sprint and taught me vivid new concepts both technically and professionally.

The challenges were to effectively collaborate with people who like me were unfamiliar with the concept thus it was very hard at first. The UML diagrams were very tedious at

first and I had to make at least 3 for each. Therefore, in case of this too I have learnt a lot. The chances to do market research, asking questions to real car rental services of Nepal were to an aid in business analysis development. The research and functionalities required for a website which first were ignored and only the codes were thought to be important nevertheless I came to know how much the researches for functionalities and designs are crucial for any project.

Continuous meetings with team members have been a lot help with the problem that arose during the development of software. The client and business analyst meetings were a lot help to know the real time website development whereby teacher pretended to be client at first and thereafter he would give suggestions and directions for further improvement has been a great help for the process and personal development. The youtube videos were worth watching as they aided in understanding the concepts of UMLs, Business Analyst, and Collaborative Development. The sprint too enabled me to work within the deadline which though tedious at first nevertheless after the completion of sprint it was definitely achieving milestones and could be counted as steady progress. The research done during the process too had and have been an integral part and habit which in turn helped me to stay updated with recent market changes (kissflow, 2023).

The journey was definitely filled with obstacles and small misunderstandings too. Nevertheless, overcoming them has developed my personality, the ability to adapt, and the resilience within me in collaborative workings. This experience has been a great help to me to grow professionally and I am fully committed to work on these experiences and enhancing them even more so that these skills provide me with confidence in work environment. The resources enabled me in my personal development with insights and perceptions with hands-on experience. The wealth of knowledge offered by the source mentioned has been very valuable for my technical, professional, and personal growth.

7.2.5 Meeting Minutes

Location: Online, Google Meet
Date: 6th April, 2024
Time: 8:00 AM

Attendees:

1. Pragati Kuinkel
2. Karan Sah

Attendance:

Role	Name	Signature
Project Manager	Pragati Kuinkel	
Business Analyst	Karan Sah	

Discussion:

An online meeting was held on 6th April at 8 AM in the morning with our Business Analyst Karan Sah where we finalized our UML diagrams after refining it, finalized our product backlog and worked on the wireframes. We did all of this work which was already done to check everything properly and find out if there were areas of improvement in the diagrams.

We checked out everything to see if we had overlooked anything and if we could add up or remove the unnecessary criteria. Then I asked him to pull the code pushed by Simran to check if everything is working well in his device as well.

We then hosted the page from our own device simultaneously and checked out the buttons, where the links will lead us and searched for the areas of improvement but came to a conclusion that everything was working well.

The meeting adjourned at 10:00 after working well on the wireframe of the user dashboards.

Agendas for Next Meeting:

- To show the wireframe to our developers
- To let our developers know our refined UML diagrams
- Know the updates from the developers.

Meeting number: 10
Location: Online, Google Meet
Date: 6th April, 2024
Time: 9:00 PM

Attendees:

1. Pragati Kuinkel
2. Karan Sah
3. Simran Gurung
4. Roshan Chapai

Attendance:

Role	Name	Signature
Project Manager	Pragati Kuinkel	
Business Analyst	Karan Sah	
Frontend Developer	Simran Gurung	
Backend Developer	Roshan Chapai	

Discussion:

After a brief discussion and improvements made by the Business Analyst and Project Manager in the morning, we then held a short meeting with all the members in the evening to let our developers know about the updates and see the updates from their side.

We showed wireframes to that had been created in the morning to our frontend developer.

Simran, our frontend developer told the updates and the backend developer said that the backend of the login and signup page of the user has been made.

The meeting adjourned at 9:20 PM after hearing the updates from all parties.

Agendas for Next Meeting:

- To see the updates from the developers.

Location: Student Lounge, WLV Block, Herald College Kathmandu
Date: 11th April, 2024
Time: 9:30 AM

Attendees:

1. Pragati Kuinkel
2. Karan Sah
3. Simran Gurung
4. Roshan Chapai

Attendance:

Role	Name	Signature
Project Manager	Pragati Kuinkel	
Business Analyst	Karan Sah	
Frontend Developer	Simran Gurung	
Backend Developer	Roshan Chapai	

Discussion:

After the class of HCI, we all waited for all of the members to arrive for the meeting, then the meeting commenced at 9:30 where we discuss about Vercel app, how it can benefit us in our project and who would deploy the project in the platform.

As per our research and from the conclusion from the client meeting, the Vercel app is a little show but is very helpful to deploy and see our project. Doing so it can be useful to find the error and bugs in our code.

We then informed about the important topics that we went through in the client meeting to our frontend developer who was unable to join the meeting due to health issues.

After all the discussions and research, we adjourned the meeting at 10 AM.

Agendas for Next Meeting:

Meeting number: 13
Location: Online, Google Meet
Date: 15th April, 2024
Time: 8:30 PM

Attendees:

1. Pragati Kuinkel
2. Karan Sah
3. Simran Gurung
4. Roshan Chapai

Attendance:

Role	Name	Signature
Project Manager	Pragati Kuinkel	
Business Analyst	Karan Sah	
Frontend Developer	Simran Gurung	
Backend Developer	Roshan Chapai	

Discussion:

Meeting commenced right at 8:30, in this short meeting we discussed about the updates done in the project, the code pushed in github by our frontend developer and the login and signup functions created by the backend developer, we also discussed about the tables of the database.

Then we agreed to deploy the project in the Vercel platform for the purpose of testing, it would make it easy for the QA to test the product and find if there are errors.

After a short discussion, the meeting adjourned at 8:45 PM.

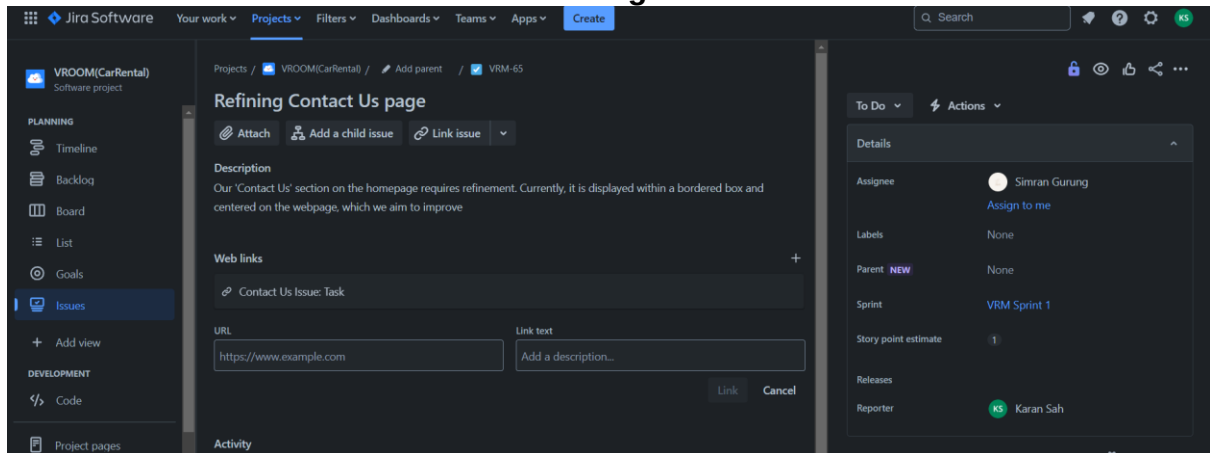

Agendas for Next Meeting:

- See the project after it has been deployed
- Show the progress to the client

7.2 Issue Tracking

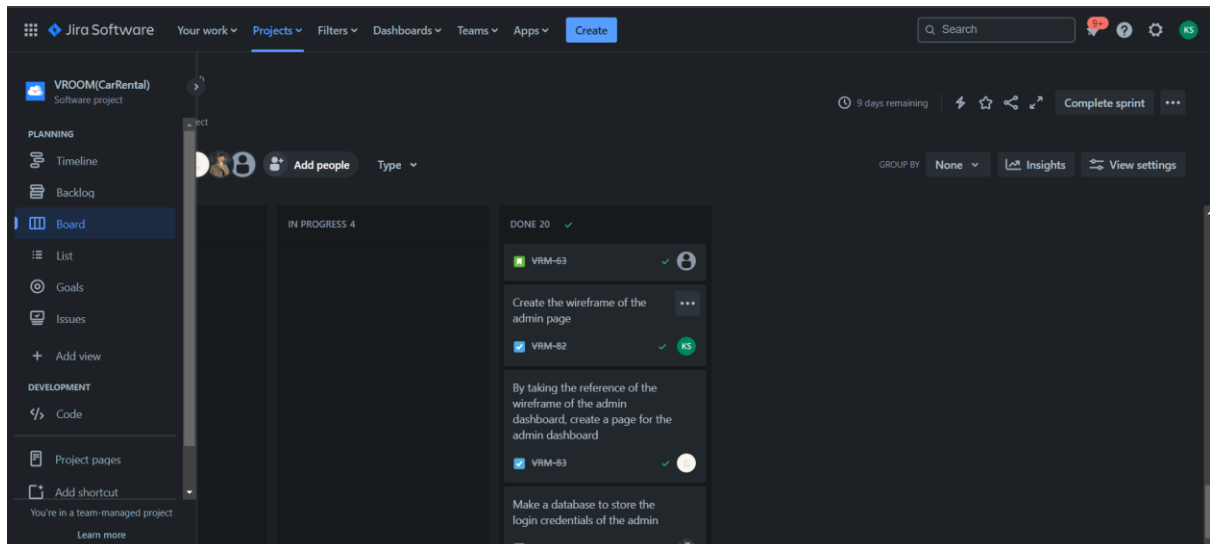

7.2.1 Screenshot of Issue: Contact Us Page

7.2.2 Screenshot of Issue: Submit Button Misfunction

7.2.3 Screenshot of Issue: Wireframe Creation

7.2.4 Report on Issue Tracking

The issue tracking was to be done such that the overall functionalities of the website

were to be ensured with the user stories in the product backlog and is according to the sprint backlog. The issues likely to occur were to not completing the works of sprint 1 within its deadline. Meanwhile, the tracking was done through periodic checks of the website, design, wireframe and functionalities of the website in the constant offline and online meetings. The identified problems were to be solved effectively ensuring the website functions normally. There were cases of the website's UI and there were bugs in the website too which were solved after mentioning the issues in Jira and through meetings.

The initial design of Contact Us was in a double-boarded box which made the website have visual clutter as well as imbalance. The visual flow too was disrupted. Likewise, the website was too simplistic as suggested during the client meeting. Thus to address this a redesign was made which simplified the section's appearance improving the overall look. Likewise, simplistic pictures were added making the overall design looking pleasing. The alignment was adjusted and subtle background colors were used which improved the overall designs.

The submit button encountered a malfunction during car reservation where but after clicking it; it failed to submit the form stopping users from reservations. To solve this the development team conducted an investigation in the backend code. After identifying the error, we corrected it allowing for smooth reservation process. Users were able to successfully submit their reservation requests after that.

There were problem with the mismatch of admin dashboard wireframe and design at first which was later on solved through CSS alignment. Likewise, as our first dashboard and work was to work on frontend design on user's, the wireframe of admin userboard was not made at first thus making it hectic and confusing during the design of wireframe of admin.

The effective issue tracking made it possible to maintain integrity of the website, ensuring its proper functionality and user-friendly website (SocialMediaToday, 2014). Resolving usability issues aided in enhancing user experience and improving all the other issues proved the website worked seamlessly. The operational efficiency was too ensured after solving the occurred issues allowing timely resolutions and which too minimized project timelines. The tracking ensured quality and reduced the failure of the website during critical times.

Thus, effective issue tracking is a must for the optimal operation and performance of the website. It is essential for user satisfaction and smooth operation of websites. This

aided in the concept of tracking the issues frequently and periodically. Doing this ensures the user and admin can navigate the complexities of development which deliver high-quality websites and high-quality user experiences. This part taught to track the issues proactively which ensures the website's smooth operations.

8. Sprint Retrospective and Conclusion

In summary, sprint 1 has been a great learning curve whereby from being unfamiliar with terms like backlog, sprint, client, product owner, and ERD to doing and gaining hands-on experience, it has been such a knowledgeable journey. With the objective of fulfilling the functional designs and requirements (their product backlog, sprint backlog, designs), scoping the whole project through reports, questionnaires, market analysis, taking examples of the website, having good collaboration with the teammates through Google chats, JIRA, online meetings, gaining a lot in personal development and having continuous personal development through watching and learning from youtube channels, reports and through meeting minutes, this whole project has aided in learning collaborative development.
