

Human Computer Interaction – Task 3

Student Id 2329860

Student Name : Karan Sah

Section :L5CG5

Module Leader :Mr. Dipesh Shrestha

Lecturer : Mr. Pramin Joshi

Tutor :Mr. Anish Maharjan

Date : 19th May, 2024

Abstract

The report presents the design process and has comprehensive explanation of the processes followed during the designing process, and the rules implemented in the designs. It shows the development of Live Show Ticket Booking Mobile Application which was created for the sole purpose of simple and user friendly process of viewing and purchasing tickets for the shows. The process has brainstorming for generating ideas, wireframes and wire flow to map the process, user personas to understand the targeted audience thus making it a comprehensive mobile design.

The report delves into every steps followed during the designing process reporting the methods and tools used, the decisions made and the insights behind why such decisions were made. Usability and accessibility factors were also considered resulting application offering a user friendly and efficient platform to book live show tickets.

Acknowledgment

During the duration of the project aids from the module leader, lecturer and tutor were indispensable. I would like to express my gratitude to Mr. Anish Maharjan, our tutor for his valuable insight throughout the semester and during the project. His insights and feedback have been a great help in shaping and improving the project. Likewise, I would like to extend my sincere thanks to our module leader, Mr. Dipesh Shrestha for his leadership in this module. His comprehensive and engaging learning experience were helpful in understanding the module. A thank you to Mr. Pramin Joshi, our lecturer for his invaluable teaching and clarity during the lecture which greatly inspired me to understand the complex topics and implement them in my project.

I am also grateful to Herald College Kathmandu for providing us with supportive and stimulating environment academically and the resources and opportunities provided by the college. I am also grateful to my friends and the testing friends for their valuable and honest insight during the testing phase.

Introduction

My Shows, a platform with the goal to make an application to book live shows online, to make the design responsive to tablets and intuitive, and the platform which has accessibility flow is a way to simplify and revolutionize the way people experience booking live entertainment tickets with convenience and ease. The design aims for users to have a seamless experience. The interface allows users to browse through different events happening, their information, the ratings of the shows among the attendees, the rates of discounts and offers, and secure payment where they can sign up and log in for personal experience. The interface also has accessibility features for Nepalese language and for people with protanomaly vision. The interface aims to be both highly functional and visually pleasing for pleasant user experience.

The primary problem that this interface was built to solve is the frustrating part of booking tickets for live shows. Traditional method of booking tickets often has demerits in both in terms of user experience and the show performers, sometimes due to low attendance in shows due to users being unaware of the shows and the problems of selling tickets in black. The application aims to simplify this tedious traditional process by offering a centralized platform. It is easy to navigate making the users' experiences in these purchases seamless. This in turn saves time and aids in improvement of user satisfaction thus making the fans of show performers enjoy their favorite show live without much hassle. The interface provides clear distinction of shows, offers and discounts and payments options with show ratings making it an ideal platform.

Design Process

The design process was serial with one step being inspiration to another.

First brainstorming about the whole project was done:

Brainstorming:

Brainstorming was a crucial step on designing the application as it gave the structure and the whole idea behind what the application to design is and how can it be designed.

Figure 1 Brainstorming: What

A minimalistic design with clean and modern visage with Poppins text overall for consistency with neutral tones of color and red button were done. The accessibility for protanomaly and Nepalese text were to be ensured. The design is responsive catering for tablet users.

Figure 2 Brainstorming: How

Using Poppins throughout the application for clean, modern and consistent look making the application more professional. As the font is highly readable and works across all the devices, it ensures consistency. Using protanomaly vision and Nepalese language options for accessibility and making the design tablet responsive too.

Figure 3 Brainstorming: Other Questions

Clear hierarchy during prototype flow for smooth steps to be done. Neutral theme of white and buttons of red for color consistency, implementing simple navigation menu and standard fonts to enhance user experience was thought of during this step.

Visual Elements:

Figure 4 Brainstorming: Color Palette

White background with buttons of red for simplicity and user friendly design was thought during this process of brainstorming.

Figure 5 Brainstorming: Typography

Nevertheless in design, Poppins was used which suited the design style making it look more consistent throughout.

Figure 6 Brainstorming: Imagery

The photographs of show performers were used and they were of high quality thus making design look more appealing.

Figure 7 Brainstorming: Iconography

The icons used were simple and related to real life thus making the design free of confusion.

Figure 8 Brainstorming: UX Considerations

The right flow was thought of so that user may not get confused.

Figure 9 Brainstorming: User Feedback

The ratings of show were put just below the show description to aid in users to choose their favorite show.

On Tablet

100

Ensure the application is fully responsive across various devices, prioritizing mobile devices to accommodate users who may be booking on the go.

Figure 10 Brainstorming: Mobile Responsiveness

The application was to be made responsive for the tablet users too.

Mood Board

Brainstorming lead to mood board whereby it aided in the inspiration behind the app designing, the colors, text, font and overall visual impact of the application.

Figure 11 Mood board: App Design Inspiration

The mood board's key component is the app's design inspiration whereby the easy to use app screen with clear button ensuring effortless navigation was ensured. Key elements of inspiration include:

Clear Button: Button are clearly labeled ensuring the user can understand and avoid confusion in navigation to enhance user experience.

Minimalist Design: The overall design is minimalistic only focusing on simplicity and users' ease thus this reduce application's inefficiency.

Strategic Placement of Information: Essential information are placed prominently which captures the user attention.

User Friendly Layout: The layout is clean and neat ensuring even new user can navigate without confusion.

Emphasis on Accessibility: Accessibility in the application include protanomaly vision, and Nepalese language.

Figure 12 Mood board: Texture Swatches

The different color and textures for button were selected from different shades of red like stage curtains, red paper texture, red border, red ticket stubs, red gradient background, geometric pattern for good selection for button making the button not too bright or dark and ensuring pleasing color of users.

Color Palette Exploration

Let's explore different color palettes that I can use in my app design. I'll consider the emotions and associations that different colors evoke.

RED BUTTON DESIGN

Red buttons can create a sense of urgency and draw attention. They can be used for important actions like purchasing tickets or confirming bookings.

BLACK AND WHITE PALETTE

A black and white color palette can create a sleek and modern look. It can be used for text, backgrounds, and icons to provide contrast and clarity.

Figure 13 Mood board: Color Inspiration

The button was determined to be red from texture swatches, nevertheless the overall design of application is black and white palette which denotes modern look and is visually appealing with red buttons. The palette is also good for contrast with button, icons and is good for clarity.

Photos of Artists for the Show

Photos of Popular Artists for ticket booking

Figure 14 Mood board: Photography

The photographs were determined to be of high quality pictures of famous artists for better appealing mobile application.

Figure 15 Mood board: Typography

Typography's major emphasis is for bold and clear fonts which must be easy to read and after being creative and experimenting the Poppins was determined to have a good match for the overall design.

User Persona

Making user persona aided in knowing the targeted audiences making it easier to design the application as it was crucial in understanding user needs and behavior, prioritizing features and functionality, guiding content and visual design and testing.

The application is generally enjoyed and used by the age group of 20 to 35 years of people who has certain amount of pocket money or income are passionate about live shows, mostly in music and comedy sector's live shows.

Figure 16 User Persona: Sandesh Adhikari Bio

Figure 17 Sandesh Adhikari's Details

For instance, Sandesh Adhikari who has interest on music of Nepal and was influenced by the shows that he used to hear on radio and television during his childhood, his goal to make the live show more memorable has expectation of user friendly interface, whose motivation is to find hidden artist has pain of frustrating user experience. Thus, this aided in improving the said functionalities.

Figure 18 User Persona: Jyoti Magar's Bio

Figure 19 Jyoti Magar's Details

Likewise, Jyoti who has an interest in comedy and music and was influenced by rock cultures in Pokhara, aims to book tickets easily, has expectations for details of events and their description listed, whose motivation is to create memorable experiences for

herself, and finds most website harder to coordinate and use. She as a student aided in giving the details thus making it easier for my design process to design accordingly.

High Fidelity Design:

The design was done after the above designing processes and gaining insights from them.

Figure 20 High Fidelity Design

Prototyping

Then the prototyping was added and done after the high fidelity design was completed thus giving the users the idea of what happens in the prototype and how the flow works thus clearing them of confusion and also giving them the experience of actual product flow.

Figure 21 Prototyping

Evaluating and Testing

Testing Methodologies

A testing process was carried out to ensure the application was user-friendly and accessible.

Usability testing:

Description: Real users interacted with the prototype to perform specific tasks. This in turn aided in identifying issues.

Participants: Three participants with different demographics and backgrounds were selected.

An IT Student, 22 years old

A Medical Student, 23 years old

An office Worker, 26 years old

Process: Participants were given a questionnaire and were recorded using the prototype and observations were noted.

Accessibility testing was done with text readability.

Usability Issues Uncovered

Customer Support Page

All three users reported that while clicking on customer support the following page didn't show up

The solution was to implement the page and connect it in a revamped design.

Proof of Evaluation

Session Recordings: Video recording links of all three users using prototype are provided in Appendix.

User Feedback: User feedback is provided on the video about the prototype

Questionnaire: A questionnaire with their answers as answered by the users is included in Appendix.

Questionnaire data: The data of the answers are provided.

Shneiderman's 8 Golden Rules of Interface Design

Clarity

Figure 22 8 Rules: Clarity

The interface is very clear, the home page is concise. The shows are clearly listed. The navigation menu too is very clear and understandable.

Consistency

Figure 23 8 rules: Consistency

As it can be seen, the consistency of design is throughout the app. The font types, font sizes, the white layout of the app design, and the red button submission and the major fonts of the app are consistent throughout the application.

Simplicity

Figure 24 8 rules: Simplicity

The features and functionalities of the application is very simple mainly emphasizing on only essentials and having minimalistic clutter. Navigating through the app is very straightforward without any confusion.

Feedback:

Figure 25 8 Rules: Feedback

As it can be seen there is option of customer care in navigation for users so that they can provide the application with their precious feedback.

Flexibility

Tablet view:

Congrats on your reserved show !

Payment Success

Receipt

[Back to Home](#)

Figure 26 8 rules: Flexibility - Tablet view

Mobile view:

Congrats on your reserved show !

Payment Success

Receipt

[Back to Home](#)

Figure 27 8 rules: Flexibility - Mobile view

The platform adapts to both mobile and tablet views as seen from the above example, making the application flexible.

Visual Hierarchy

Figure 28 8 rules: Visual Hierarchy

The application prioritizes the home feed with important visuals displayed prominently with trending events on the top and then the events near user forming a strict hierarchy. Likewise the navigation menu is on top making the application design hierarchical.

Accessibility

Figure 29 8 rules; Accessibility - Protanomaly

Figure 30 8 rules Accessibility - Nepalese Language

The application provides solutions for people with protanomaly vision. Likewise, the application is also in another language i.e. Nepalese making the application accessible.

Figure 32 8 rules: User Control Edit Functions

As seen in the application, the user has control over their profile settings in personal details, chooses the shows listed, and can customer care for any dissatisfaction and help. Thus, the user has control over the application and what they view.

Nielsen's 10 Usability Heuristics

Visibility of System Status

Figure 33 10 Heuristics: Visibility of System Status

As seen in above highlighted part the system clearly indicates the user that they have been registered making the status of system visible.

Match between System and the Real World

The terms like finding trending events, and events near you are the same as the real world which the system matches. Likewise, the notification button of the bell and the search button of magnifying glasses in the system all match with real life.

Consistency and Standards

As it can be seen, the consistency of design is throughout the app. The font types, font sizes, the white layout of the app design, and the red button submission and the major fonts of the app are consistent throughout the application.

Error Prevention

←

Create Account

Create an account so you can explore all the shows near you !

myEmail

Confirm Password

Sign up

Already have an account? [Login](#)

Missing Field

As the confirm password field is empty, the system urges the users with a missing field message preventing the error of signing up without entering the required field.

Recognition rather than recall

Without having to memorize the structure of the system and application, users can navigate through the application by only looking at icons.

Flexibility and efficiency of use

The user can quickly go back without the compulsory to buy a ticket by just clicking back button make the application easy to use and be flexible.

Aesthetic and Minimalist Design

As seen from the home page, the application is very simple and has only minimal and required designs and components

Help Users Recognize, Diagnose and Recover from Errors

The image shows a mobile application screen for creating an account. At the top left is a red back arrow. The title 'Create Account' is in bold red text, followed by the instruction 'Create an account so you can explore all the shows near you !'. Below this are three input fields: the first contains 'myEmail', the second contains '*****', and the third is labeled 'Confirm Password'. A red 'Sign up' button is positioned below the fields. At the bottom, there is a link 'Already have an account? Login' and a red banner at the very bottom that reads 'Missing Field'. A yellow highlight is drawn around the bottom portion of the screen, encompassing the login link and the error message banner.

The missing field message suggest the user about missing filed after which is filled by user the user can continue towards registration.

Help and Documentation

The customer can ask for help and aid through customer care.

Questionnaire preparation for user testing

Usability Testing Questionnaire	
np03cs4a220155@heraldcollege.edu.np Switch account	
 Not shared	
General Information A brief personal information	
Name: Your answer	
Age Your answer	
Gender ☐ Male ☐ Female ☐ Other:	

Occupation

Your answer

1. What feature or element of the UI prototype on Figma do you find most appealing or user-friendly?

- ☐ Navigation menu
- ☐ Interactive buttons
- ☐ Visual aesthetics
- ☐ Overall flow and organization

2. Were there any specific features or interactions in the Figma prototype that stood out to you positively?

Your answer

3. How well do you think the Figma prototype reflects our brand identity and design guidelines?

- ☐ Very poorly
- ☐ Poorly
- ☐ Neutral
- ☐ Well
- ☐ Very well

4. Walk through steps you take to complete the process of booking tickets for a live show using the prototype.

Your answer

5. Could you share any features or functionalities you wish the live show ticket booking prototype had

Your answer

6. How easy is the live show ticket booking prototype to use?

- ☐ Very easy
- ☐ Somewhat easy
- ☐ Neutral
- ☐ Somewhat difficult
- ☐ Very difficult

7. Did anything about the live show ticket booking prototype frustrate you when you were using it?

- ☐ Yes
- ☐ No

If yes, please describe the frustrations:

Your answer

8. Were you able to easily understand the different features and functionalities available for selecting tickets and seats within the prototype?

- ☐ Yes, very easy to understand
- ☐ Somewhat easy to understand
- ☐ Not very easy to understand
- ☐ Not easy to understand at all

9. Did you encounter any technical issues or challenges while interacting with the live show ticket booking prototype?

- ☐ Yes
- ☐ No

If yes, please describe the issues:

Your answer _____

10. How satisfied were you with the overall user experience of booking tickets through the prototype?

- ☐ Very satisfied
 - ☐ Somewhat satisfied
 - ☐ Neutral
 - ☐ Somewhat dissatisfied
 - ☐ Very dissatisfied
-

Flow
Design Flow

11. Can you describe the flow of actions you took from entering the platform to completing the ticket booking process?

- ☐ Very clear and straightforward
 - ☐ Mostly clear, with some confusion at certain points
 - ☐ Unclear and confusing
-

12. Were there any points in the flow where you felt uncertain about what to do next?

Your answer _____

13. Did you find the flow of actions logical and intuitive, or were there any areas that seemed disjointed or confusing?

- ☐ Very logical and intuitive
- ☐ Mostly logical, with some confusing areas
- ☐ Disjointed and confusing throughout

Accessibility

14. How would you rate the accessibility of the live show ticket booking prototype for users with visual impairments or protanomaly? (1 being lowest and 5 being highest)

- | | | | | |
|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| 1 | 2 | 3 | 4 | 5 |
| ☐ | ☐ | ☐ | ☐ | ☐ |

15. Were the text and interface elements sufficiently clear and legible?

- ☐ Yes, very clear and legible
- ☐ Mostly clear and legible, with some exceptions
- ☐ No, some text and interface elements were difficult to read

16. Would you prefer the option to use Nepali language throughout the live show ticket booking prototype?

- ☐ Yes, I would prefer to use Nepali language exclusively
- ☐ No, I am comfortable using English language
- ☐ I have no preference
- ☐ It was helpful

17. How accurate and understandable were the translations in the Nepali language option?

- ☐ Very accurate and understandable.
- ☐ Somewhat accurate.
- ☐ Not accurate or understandable.

18. Was it easy to provide feedback or report accessibility issues within the app?

- ☐ Yes, it was very easy.
- ☐ Somewhat easy.
- ☐ No, it was difficult.

19. Were error messages clear and helpful in guiding you to correct any issues?

- ☐ Yes, they were very clear and helpful.
- ☐ Somewhat clear and helpful.
- ☐ No, they were confusing.

Golden Rules and Heuristics

20. Did the prototype provide clear feedback and guidance to confirm that your actions were successful?

- ☐ Yes, clear feedback was provided
- ☐ Somewhat, feedback was sometimes unclear
- ☐ No, feedback was lacking or unclear

21. Were error messages informative and easy to understand when you encountered issues during the booking process?

- ☐ Yes, error messages were clear and helpful
- ☐ Somewhat, some error messages were confusing
- ☐ No, error messages were uninformative or difficult to understand

22. Did the prototype offer sufficient flexibility and control, allowing you to easily correct mistakes or change your selections?

☐ Yes, plenty of flexibility and control

☐ Somewhat, flexibility was limited in some areas

☐ No, flexibility and control were lacking

23. How well did the prototype align with usability heuristics such as visibility of system status, match between system and the real world, and user control and freedom?

☐ Very well

☐ Moderately well

☐ Not well

The link to the drive is:

https://drive.google.com/drive/folders/1MZx1G49jI1FPXQvm3_WFW4_OKw3MSaaA

Key Takeaways

• 1. Visual Appeal and User-Friendly Elements:

- Manoj Neupane found the visual aesthetics most appealing, indicating that the design elements are attractive and engaging for users.
- Sandesh Adhikari appreciated the navigation menu, suggesting that the layout and ease of navigation are strong points.
- Milan Tamang valued the overall flow and organization, highlighting that the process is well-structured and intuitive.

Karan Sah

Brand Identity and Design Guidelines:

- Both Manoj Neupane and Sandesh Adhikari felt that the prototype reflects the brand identity and design guidelines well, indicating consistency with the intended brand image.

Karan Sah

Technical Issues and User Flow:

- None of the users encountered technical issues, which suggests that the prototype is functioning smoothly and is technically sound.
- Manoj Neupane did not experience any uncertainty in the user flow, indicating that the steps are clear and straightforward.

Karan Sah

Language Preferences:

- Manoj Neupane is comfortable using the English language, which suggests that providing a multilingual option is not a priority for all users but could still be considered for broader accessibility.

Karan Sah

Figure 35 Key Takeaways

Conclusion

Going through the design process step by step aided in fulfilling the criteria required for the prototype. Following the design process was very crucial and provided with adequate breakthrough and prevented from making errors in the process and go on the wrong path. Doing user research through aided in understanding the preferences of the users thus guiding the design process accordingly. Likewise testing with different users provided with many different wisdom form different process which made the revamped design even more attractive and was helpful in design decision. Wire framing and prototyping allowed to visualize the flow of the interface thus giving environment for design and testing. Similarly, sticking to the heuristics principles made the design consistent and had considerable effect on making the prototype visually appealing.

Discussing the accessibility and usability issues with users there were some discovered and was then further improved in the revamped design whereby the issue was the frustration felt with the non-responsive customer service button. The improvement was to implement the functional button. The prototype was proven to be easy to use and understand thus fulfilling the major criteria of the prototype. The

language option included although not preferred was appreciated by the users for the users in their family members. The visual clarity and error messages and guidance too was appreciated by the users. Overall, the experience was very enriching.

Project Cover:

Project Description:

My shows

My objective is to revolutionize the way people experience live entertainment by providing a seamless and immersive online platform for booking tickets to their favorite shows. I aim to empower users with convenience, choice, and accessibility, ensuring that every ticket purchase is a gateway to unforgettable experiences.

Project team

Karan Sah
Student

Goals

Product goals

Goal

To make a application to book live shows online.

Goal

To make the design responsive to tablet.

Goal

Include accessibility flow

Brainstorm:

Brainstorm for Ideas on Live Show Booking Application

Questions

What?

What will I...?

What visual style should I adopt for the user interface (UI) of my booking application?

What accessibility features should I include in my booking application to ensure inclusivity?

What interactive elements should be integrated into the UI to enhance user engagement?

What design strategies should I employ to ensure my booking application is responsive across different devices and screen sizes?

How?

How might I...?

I could choose complementary fonts that are easy to read and convey a sense of professionalism.

How might I implement accessibility features, such as high contrast modes and keyboard navigation, to ensure inclusivity for users with disabilities?

How might I integrate interactive elements, such as animated transitions and hover effects, to create a dynamic and engaging user experience within the UI?

How might I utilize responsive design techniques, such as fluid grids and flexible layouts, to ensure seamless usability across various devices and screen sizes for my booking application?

Other Questions?

Other Questions...?

How might I organize the layout of my booking application to prioritize ease of use and clarity for users?

What basic color scheme can I choose to ensure a clean and visually appealing interface for my booking application?

How might I simplify the navigation menu to make it intuitive for users to find the information they need?

What standard fonts can I use to ensure readability across different devices and screen sizes for my booking application?

Visual Elements

Color Palette

Explore a minimalist color palette consisting of neutral tones and one or two accent colors to maintain simplicity while adding visual interest.

Typography

Select a clean and easily readable font pair (e.g., a sans-serif font for headings and a serif font for body text) to ensure clarity and consistency throughout the application.

Yakov Takt

Imagery

Consider incorporating high-quality, relevant imagery (such as photographs of performers or event venues) sparingly to complement the design and evoke the atmosphere of live shows.

Iconography

Choose a set of simple and intuitive icons to represent key actions and elements within the application, ensuring they are easily recognizable and universally understood.

User Experience (UX) Considerations

Navigation Flow

What will I...?

Map out the user journey from initial landing on the application to completing a booking, ensuring a logical and intuitive flow that minimizes friction.

Note

Throughout this section, prioritize simplicity and clarity in design choices to ensure a seamless user experience, keeping in mind that simplicity often leads to increased usability and satisfaction.

User Feedback

Implement mechanisms for users to provide feedback on their booking experience, such as surveys or ratings, to gather insights for continuous improvement.

Karan Sah

Mobile Responsiveness?

On Tablet

100

Ensure the application is fully responsive across various devices, prioritizing mobile devices to accommodate users who may be booking on the go.

Moodboard:

MOODBOARD FOR LIVE SHOW TICKET BOOKING APP DESIGN INSPIRATION

App Design Inspiration

Texture S

App Design Inspiration

I've found some examples of an easy-to-use app screen with clear buttons and a layout showing important show details.

I've discovered an example of an easy-to-use app screen that boasts clear buttons, allowing users to navigate effortlessly through the interface.

Karan Sah

Additionally, I found a layout showcasing essential show details, strategically placed to capture attention without overwhelming the viewer.

Karan Sah

The app screen presents a minimalist design, emphasizing simplicity and intuitive functionality, ideal for users of all experience levels.

Karan Sah

With clearly labeled buttons and a clean layout, users can easily access the information they need without any confusion.

Karan Sah

Furthermore, the layout effectively highlights important show details such as dates, times, and venues, ensuring users can quickly find the information they're looking for.

Karan Sah

Overall, these examples exemplify the principles of user-friendly design, prioritizing clarity, accessibility, and efficiency in navigating through the app.

Karan Sah

Texture Swatches

Texture Swatches

Explore different texture options that resemble stage curtains, ticket stubs, or simple patterns and textures.

Typography inspiration

Explore different typography styles and fonts for your app design.

BOLD AND CLEAR

Use bold and clear typography for titles and headings to make them stand out.

EASY-TO-READ

Choose fonts that are easy to read, especially for longer blocks of text.

FUN AND CREATIVE

Experiment with fun and creative fonts for a unique and engaging design.

Components used:

Accessibility:

Shneiderman's 8 golden Rules:

Nielsen's 10 Usability Heuristics:

User Testing:

Figure 36 Testing with User 1 - Manoj Neupane

Figure 37 Testing with User 2 - Sandesh Adhikari

Figure 38 Testing with User 3 - Milan Tamang

Accessibility Testing:

During the test with user, the users did ask for accessibility features of Nepalese language whereby the below accessibility design was shown.

Key Takeaways:

Key Takeaways

- 1. Visual Appeal and User-Friendly Elements:
 - Manoj Neupane found the visual aesthetics most appealing, indicating that the design elements are attractive and engaging for users.
 - Sandesh Adhikari appreciated the navigation menu, suggesting that the layout and ease of navigation are strong points.
 - Milan Tamang valued the overall flow and organization, highlighting that the process is well-structured and intuitive.

Karan Sah

- Brand Identity and Design Guidelines:
- Both Manoj Neupane and Sandesh Adhikari felt that the prototype reflects the brand identity and design guidelines well, indicating consistency with the intended brand image.

Karan Sah

- Technical Issues and User Flow:
- None of the users encountered technical issues, which suggests that the prototype is functioning smoothly and is technically sound.
 - Manoj Neupane did not experience any uncertainty in the user flow, indicating that the steps are clear and straightforward.

Karan Sah

- Language Preferences:
- Manoj Neupane is comfortable using the English language, which suggests that providing a multilingual option is not a priority for all users but could still be considered for broader accessibility.

Karan Sah

- Ease of Use and Understanding:
- Sandesh Adhikari found the prototype somewhat easy to use and understand, implying that while the interface is generally user-friendly, there may be areas that require simplification or clarification.
 - Milan Tamang successfully walked through the booking process without issues, affirming that the steps are logical and effective.

Karan Sah

- Customer Support and Frustrations:
- Milan Tamang was frustrated by the non-responsive customer service button, pointing to a critical area for improvement in ensuring reliable customer support.

Karan Sah

- Satisfaction and Error Messages:
- Milan Tamang was very satisfied with the overall user experience and found error messages clear and helpful, suggesting that the prototype effectively communicates issues and guides users to solutions.

Karan Sah

- Improvement Areas:
- Despite the overall positive feedback, the non-responsive customer service button and the somewhat complex areas noted by Sandesh Adhikari indicate specific aspects that need enhancement to optimize user satisfaction and functionality.
